

# Munksund

**M**unksund's roots stretch back to the 1860s and one of the first steam sawmills in northern Sweden. Today the mill produces 360,000 metric tonnes of kraftliner per year. Raw materials are harvested mainly from sustainably managed Norrland forests, where conditions are particularly favourable for slow growth. This produces unusually strong, high quality fibres.

## Products

- SCA White Top Kraftliner
- SCA Kraftliner
- SCA Kraftliner WS

## Certifications

Quality ISO 9001  
Environmental ISO 14001  
Safety OHSAS 18001

## Machinery

### Fourdrinier machine

**Grammage range:** 125-440 g/m<sup>2</sup>  
**Production:** 360,000 tonnes/year  
**Speed max:** 750 m/min  
**Trim max:** 6.50 m

### StreamLine Onesider wrapping line

**Reel belly:** 2 wraps white kraftliner coated with 25 g/m<sup>2</sup> polyethylene on inside  
**Reel ends:** corrugated board circle and an outside paper circle with polyethylene laminate on the inside, melted to close reel ends

## Milestones

- 1928** Unbleached pulp start-up
- 1961** Kraftliner mill start-up
- 1995** Total chlorine free (TCF) bleaching plant start-up: environmentally friendly process
- 1996** Two-ply linerboard machine rebuilt, better formation and surface appearance
- 2001** Combined heat and power (CHP) plant for bio-fuel based energy supply
- 2003** New press section for better surface characteristics
- 2006** Reel wrapping line start-up for better runability
- 2008** Launching of Presentation Liner campaign
